CancerCare provides services to hundreds of thousands of people with cancer and cancer survivors every year. Without a strong and affordable health care marketplace many would lose access to the essential healthcare services they need to diagnose and treat their cancer, and help them regain and protect their health following treatment. The recent proposed rule in the Notice of Benefit and Payment Parameters for 2022 would update Section 1332 Waivers and put cancer patients and survivors at risk. If finalized, this rule would encourage privatization of core functions of the health insurance marketplaces and would gut important parts of the ACA. Cancer patients and survivors need quality and affordable health coverage and this rule compromises access to both by cutting funds for healthcare.gov and waiving key components of the ACA, including cost-sharing assistance. Our organization urges the administration to retract this harmful rule.
